

WORKFORCE PREDICTOR

EMPLOYEE RESIGNATION PREDICTION USING AI

Scenario Based Learning

Name:SRIJA S

Date:12.08.2026

Problem Statement

- Company projects depends on employees.
- Sudden resignation causes project delay.
- Hard to know who will leave next month.
- Need AI to predict and plan early.

How Will You Achieve This In AI?

1. **Collect employee data:** Age, Salary, Department, Overtime, Satisfaction.
2. Use Machine Learning, Classification Model.
3. **Train with past data:** Resigned = Yes/No.
4. Predict which employees have "High Risk" of resigning.
5. HR can take action early to retain them.

3-Stage of Problem Identification

Stage 1: Machine Learning

→ Computer learns patterns from employee data.

Stage 2: Supervised Learning

→ Train AI with labeled data: Resigned or Not.

Stage 3: Classification

→ Classify employee as "High Risk" or "Low Risk".

Create The Dummy Table

Employee ID	Age	Department	Salary	Job satisfaction	Resigned
E001	25	IT	40000	YES	LOW
E002	32	IT	45000	NO	HIGH
E003	28	IT	46000	YES	LOW
E004	40	HR	60000	NO	HIGH
E005	26	IT	45000	NO	HIGH
E006	38	FINANCE	35000	NO	HIGH
